Locution Systems, Inc. offers a comprehensive suite of technology products for automated public safety dispatching and fire station alerting. The company serves public safety departments of all sizes (fire and emergency medical departments) that need to automate and streamline their dispatching and fire station alerting, as well as ARFF departments (Aircraft Rescue Fire Fighting) at airports. Its product suite includes:

- **CADVoice® Station and Fire Station Controls:** an automated dispatching and automated fire station alerting system, which also includes automated controls for fire stations (lighting, tone alerts, visual alarm indicators, and more);
- **CADVoice® Radio:** an automated dispatching system that sends messages to emergency personnel over voice radios;
- **CADVoice® Mobile:** an automated system that sends dispatches to emergency personnel in the field who have mobile data computers (MDCs) in their vehicles;
- **CADVoice® ZoneTracker™:** zone controlling software that interacts with a tech-friendly touchpad to track emergency responder units, by zone, within the fire station for faster distribution of emergency dispatches;
- **Locution EmailAlert:** a supplementary alerting system that allows dispatchers to automatically send emails to email boxes, pagers or email-enabled cell phones – in order to alert non-emergency personnel who need to know about incidents at high-profile facilities such as nuclear plants, water processing facilities, and more; and
- **Locution PagerAlert:** a supplementary alerting system that routes emergency dispatches directly to public safety workers via their pagers.

Locution Systems' products help public safety departments:

- Speed response times by seconds and minutes;
- Reduce call stacking and delays in handling multiple emergency calls;
- Reduce stress for communications center dispatchers and responders;
- Minimize "Please repeat" responses from units being dispatched; and
- Hold the line on long-term system maintenance costs and escalating facility and staffing expenses.

Year Founded: 1986 (Originally founded as GCN Electronics)
Location: Golden, Colorado
Founded By: Glenn Neal, a pioneer in public safety technology
