Locution Systems, Inc. Moves To New Headquarters

***Fast-growing public safety technology company
moves to new location to accommodate growth***

GOLDEN, Colo., Dec. 20, 2005 – Locution Systems, Inc., a provider of advanced, automated public safety dispatching and fire station alerting technology, today announced that it has moved to a new headquarters location in the Denver West office complex in west metro Denver. The move allows the company to double its space and accommodate its growing staff.

The new address is: Locution Systems, Inc., 1626 Cole Blvd., Suite 325, Golden, CO 80401. The company's main phone number and direct phone lines remain the same.

Over the past twelve years, Locution Systems has quietly become the "gold standard" in automated dispatching and fire station alerting, according to Glenn Neal, Locution Systems president and founder. "We've always placed a very high premium on R&D in the development of our product line. This is why we have been able to provide fire station alerting systems for some of the most innovative fire departments in the United States and abroad," said Neal. "As a result of our growth, we were literally bursting at the seams. Doubling the size of our headquarters will allow us to accommodate future growth, as well as provide the room we needed for expanding R&D and support operations today."

Most recently, Locution Systems introduced ZoneTracker™, an intelligent, wireless system for locating emergency responder personnel within fire stations, which allows for faster distribution of emergency dispatches from 911 call centers.

About Locution Systems, Inc.

Founded in 1986, Locution Systems, Inc. offers a comprehensive suite of automated dispatching and fire station alerting technology for public safety applications. Locution Systems' CADVoice® dispatching technology is based on “natural voice” technology – the “Mercedes” of voice-based systems. The flagship product, CADVoice® Fire Station, combines “natural voice” dispatching technology with full fire station alerting (tone-based alerts, voice dispatching, and automatic activation or de-activation of lighting, bay doors, traffic signals and more at fire stations). Additional CADVoice® products are designed for use in vehicles or for field personnel using radios, and supplementary email- and pager-enabled alerting systems round out the product suite. Locution Systems' products feature software-centric technology that's more cost-effective to maintain over time than traditional hardware-centric systems. The products easily integrate with standard Computer-Aided Dispatching (CAD) systems. Locution Systems' products are being used in many major cities throughout the United States, and have been proven to speed response times, as well as reduce 911 call stacking, dispatcher stress and operational costs. Locution can be reached at (303) 932-0014, or www.locution.com.
